

FOR IMMEDIATE RELEASE

CNSG and One Ring Networks Partner to Bring Visibility to I-85 Bridge Collapse

Partners Provide Fixed Wireless Solution and Coverage for Construction Cameras

Atlanta, GA –May 11, 2017 - In the weeks following the massive I-85 bridge collapse just south of Ga. 400, Atlanta crews have sprung to action. These crews have worked day and night to cure concrete and fabricate beams along the 350 feet stretch since the March 31st collapse. Fixing a major infrastructure issue in a booming city is no light feat, and with a project this large, the nation and its Southeastern commuters are continuously watching.

Major national media outlets including Fox, CBS, and USA Today are assessing the construction progress, and local stations are keeping a watchful eye in efforts to immediately notify commuters when the roadways are accessible again.

Converged Network Services Group (CNSG), the premier master distributor for cloud, connectivity, and cloud enablement and One Ring Networks, a preferred carrier for business connectivity solutions have partnered to extend this visibility to Atlanta commuters.

Shortly after crews began working, teams responsible for setting up live-feed cameras contacted the CNSG Atlanta office and requested expedited services for connectivity solutions.

Ryan Will, CNSG Managing Partner and advisor for cloud and data center strategy and Kellie Block, CNSG National Account Manager, contacted One Ring Networks in search of a flexible fixed wireless solution. One Ring Networks was immediately able to help. As a result of this partnership, following the initial inquiry, contracts were drafted and signed within two business days.

A 10 Mbps x 10 Mbps solution was installed, which powered the camera's live feed. One Ring Networks provided a flexible contract, which provided a temporary Internet agreement that will cover the circuit for the duration of the construction.

"We're thrilled to partner with CNSG to provide crucial connectivity services for construction crews, who are under intense scrutiny to efficiently finish this massive undertaking," said Kris Maher, VP of Sales at One Stream Networks. He continued, "We're happy to do the same for any small or mid-sized enterprise organization needing custom solutions with a quick turnaround."

When can commuters get back to their regularly scheduled lives? Well, you can guarantee that because of the CNSG and One Ring Networks partnership, Atlanta networks will be the first to know.

About One Ring Networks
