

MANAGED SERVICES

LAN/WAN MONITORING

Our managed LAN/WAN services provide monitoring, event management, maintenance, and support for IP enabled device endpoints on their premises. Our managed service professionals provide monitoring, troubleshooting, bottleneck resolution and much more to keep your IT team focused on more important matters.

BENEFITS:

- Provides standard web-based reports
- Improves performance on bandwidth utilization and interface availability

NETWORK ROUTERS

Our managed router option takes over the responsibility of managing your network routers from provisioning to router configuration to installation, management and maintenance. We determine the best and most efficient paths to move your data to its destination, allowing you to spend valuable time focusing on your business.

BENEFITS:

- Improves resource allocation and issue resolution
- Supports in-house IT resources
- Eliminates network problems

NETWORK SECURITY

With One Ring managed services, we dedicate adequate resources to network security so you don't have to. While network security can be moving target, our experienced team utilize powerful security technology and highly accurate threat intelligence to provide your network with the best protection. We set it up, maintain it and manage it.

BENEFITS:

- Includes customer premises equipment options
- Hassle-free security so you can stop worrying about outdated equipment, hardware failure and capital expenses

WIFI SOLUTIONS

WiFi monitoring support with our managed services solution provides you with wireless routers installed by qualified technicians and 24/7 management to monitor your network from our Operations Center. Our team will evaluate location factors, coverage and application/user needs, including security and bandwidth to offer you the best possible solution.

BENEFITS:

- Complete life cycle support for customers
- We provide and install the equipment for you
- Delivers a secure wireless data connection to every corner of your office
