

TEMPORARY BROADBAND

One Ring Networks offers high-speed business internet for projects and events on a temporary or short-term basis. Whether you need additional high-speed internet for a hotel conference or you need connectivity for an outdoor festival, we can take care of your digital needs. We provide short-term business internet services on a daily, weekly or monthly basis.

THE IDEAL SOLUTION FOR:

FESTIVALS: Whether it's a local production for a small gathering or a world-renowned event with thousands of people in attendance, having a smooth Internet connection can make all the difference. A dedicated link can cover all aspects of the event including entry gates, merchandise tents, production operations, and attendees' RFID bracelets for the precise amount of time that you require it.

MOVIE & TV PRODUCTIONS: Production teams are only on set for a couple of months so there's little logic in entering into a standard 24 or 36-month agreements that many ISPs demand for fiber. Instead, high speed temporary broadband can be installed in a matter of days. In addition, bandwidth can be turned up or down depending on the exact requirements of the production team.

RELOCATION: Sometimes office moves don't always work out as planned. Your business may have ordered fiber for the new office but perhaps it can not be installed until a month after you are due to move in. A temporary fixed wireless solution can help your organization bridge the gap. With rapid installation and adaptable terms, the short-term solution prevents any long-term organizational pains.

INSTALLED WITHIN DAYS

We are aware that the need for internet access is often not clear until the last minute of the planning phase, so we typically install new business internet services within 3 to 5 business days.

FLEXIBILITY

One Ring Networks gives you the flexibility traditional carriers cannot offer. With a wider coverage area and more voice options, we are able to offer improved bandwidth options at competitive prices.
